

MS Topfoam Fresh

For spotlessly clean sheds and equipment!

MS Schippers

Passion for Farming

Dirt is the breeding ground for microorganisms (including pathogens) and puts pressure on your business results. That is why it is essential to thoroughly clean housing before decontamination. And thorough cleaning is not possible without a soaking agent.

A clean living environment ensures better general health.

MS Topfoam Fresh

MS Topfoam Fresh is a powerful and foaming soak-in product with prolonged contact time. Suitable for applications in cattle, pig and poultry farming. MS Topfoam Fresh now has an improved formula which ensures even better results.

Excellent
adhesion to
vertical surfaces

Effective removal
of contaminants

Up to 30%
savings of labour
time, water and
quantity of
product used

lavender scent

The advantages of a foaming product:

- **Visible.** You can see that all surfaces are thoroughly covered with foam
- **Cleans thoroughly.** The foam penetrates the dirt, even when there is a high fat and protein content
- **Economical.** A small amount of the product produces lots of foam
- **Contact time.** The foam has powerful adhesion to surfaces

Pathogen pressure in the housing

Immediately after emptying	After pressure cleaning	After cleaning	After disinfection
			
50.000.000 pathogens/cm ²	20.000.000 pathogens/cm ²	100.000 pathogens/cm ²	<500 pathogens/cm ²
Immediately after emptying	Spray clean with cold water	Spray clean with MS Topfoam Fresh	Disinfect with MS Megades Novo

Step-by-step plan for hygienic cleaning:

- 1 Thorough preparation.** Remove all materials and equipment (manure, drinkers, feeders, etc.) from the housing unit.
- 2 Coat** all surfaces in the housing unit (and associated materials) with MS Topfoam Fresh. In cases of heavy fouling, pre-wet the surfaces.
- 3 Spray** the housing unit (and all associated materials) clean using a high-pressure jet and then rinse with low-pressure water.
- 4 Disinfect** the housing unit with MS Megades Novo, to kill all remaining microorganisms.
- 5 Rinse** the housing unit (and all associated materials) with clean water and allow it to dry.
- 6 A low-pathogen environment.** The housing unit is ready for use again.

MS Topfoam range

There are three types of MS Topfoam available. The table below shows the differences clearly.

	MS Topfoam Fresh	MS Topfoam LC Alk	MS Topfoam LC Acid
Removes fat	+++	+++	-
Removes protein	+++	+++	-
Removes manure	++	++	-
Removes lime scale	-	-	++
Removes iron deposits	-	-	++
Can be used on	concrete, plastic, stainless steel, galvanised metals	concrete, plastic, stainless steel, galvanised metals	plastic, stainless steel
Specifically suitable for	Dirt that builds up in animal housing (e.g. manure and feed)	Dirt that builds up in animal housing (e.g. manure and feed)	Areas where a lot of water is used (e.g. milking pits and milking parlours)
Fragrance	+++	+	+

Livestock farmers share their experiences

“ Arjan Berghuis NL, Westdorp

Pig farmer

We began using MS Topfoam Fresh when, during a farm expansion, we had problems with Clostridium. With the help of MS Schippers' hygiene specialist, we devised a plan to tackle it. You can realise a lot of improvement through cleaning and decontaminating your housing. Previously we had 20% of our animals doing poorly because of Clostridium, and it was only 5% after we took action.

“ Bennie en Heleen Aarts NL, Nederweert-Eind

Goat farmers

We chose MS Topfoam Fresh because of the speed and simplicity of application and the thorough cleaning produced by the foam's soak-in action. A visibly clean milking parlour is not good enough. Since we have been paying more attention to hygiene, the tank cell-count has dropped by 200,000 and the cell count went down from 6 to 3.
